Introduction

At the beginning of 2020, countries around the world have been plunged into the crisis of an unprecedented coronavirus pandemic (COVID-19). The impact of this pandemic on the world is deep and wide, changing the global political and economic order, accelerating the expansion of the global supply chain reorganization, rearranging the international economic sectors, and changing people's lives and consumption modes; these changes are both a challenge and an opportunity. Drawing on the experience of past SARS outbreaks, Taiwan has taken great advantage of its stable public health system and a high degree of nation-wide awareness of pandemic prevention, and the results of the advanced deployment of prevention have been highly acclaimed internationally.

Based on the spirit of humanity and mutual aid and the responsibility for being a member of the global village, and in order to fulfill President Tsai Ing-wen's vision of establishing a "Taiwan brand" of global strategic materials manufacturing industry, the Overseas Community Affairs Council instructed its 36 overseas offices to string local Taiwanese enterprises that are engaged in pandemic-prevention materials together with the world to fight against the pandemic. This manual is compiled to assist overseas Taiwan businesses around the world in contributing to the fight against the pandemic, building the "Taiwan Brand" and polishing the name of Taiwan.

1.1

Country / Region	Brazil
Company	1. CEL Indústria de Calçados Ltda. CE-Fortaleza 2. Kemo Indústria de Calçados Ltda. BA-Amélia Rodrigues

9.1

Country / Region	Philippines / Metro Manila
Company	Min Shiang Corporation
Introduction of the service / product / technology / system against COVID-19	<p>Min Shiang Corporation is a Taiwanese company located in Metro Manila, Philippines, with over 28 years of experience. We import high-quality Taiwan products and focus on local high-end markets. At present, we are the official distributor of the "Smart Plasma Mask" purification machine. Different from other traditional disposable masks, we adopted power-type reusable lithium batteries and N95 filters that filter up to 99.97% of airborne particles. We, then, put in a plasma air purifier producing negative ions to achieve the sterilization effect. This creates a negative oxygen ion state after the thunderstorm that gives a feeling like bathing in the fresh forest air environment and can relieve fatigue and mental stress. It can be used as a body-care product at home 1-2 times a day to keep lungs and respiratory tract away from allergies and other symptoms. In addition, breathing can be more normal because of its double-fan design that provides a row of suction without the sultry feeling of traditional masks.</p> <p>Recommended places of use: PM2.5 environment, hospitals, elevators, shopping malls, offices, cars, gyms, running, climbing stairs, enclosed spaces, and many other places.</p> <p>The unique design principles and practical experience allow us to provide quality service to Taiwan and Worldwide.</p>
Contact for further inquiries	<ul style="list-style-type: none"> ● Name and title : Jason Chen / Executive Specialist Ann Mesias-Babas / Marketing Assistant ● Telephone : +63-9176082618 / +63-9228453708 ● Email : mscshop29@gmail.com ● Line : 0985252351 ● Website : www.facebook.com/SmartPlasmaMask/

9.2

11.4.1

Country / Region	U.S. / New York
Company	Graphen, Inc. 圖策智能科技公司
Introduction of the service / product / technology / system against COVID-19	<p>Graphen, Inc. built a real-time genome evolution monitoring analysis service of the COVID-19 viruses. Graphen analyzed the evolution of COVID-19's virus SARS-CoV-2 with more than 45K strains of viruses from all over the world. Our team mapped out the evolution of all the known genome sequenced COVID-19 viruses. Graphen analyzed the variants of each reported whole genome from more than 70 countries to date and identified the mutations as they spread. By understanding the mutation of each virus and locating where those variants are in its near 30,000 genetic locations, Graphen can identify virus' evolution chain, as well as clusters. Such mutation and propagation patterns can help companies better identify targets for drug development, public health prediction on the spreading speed, or even predict the harmfulness of specific variants that may cause symptoms beyond those observed from the original strain. In addition to providing the real-time evolution monitoring service, Graphen is also working with a company in California and a research institute in Taiwan on the COVID-19 vaccine development.</p>

11.4.2

Country / Region	U.S. / New York
Company	United Biomedical, Inc. (UBI) 台灣聯亞生技集團
Introduction of the service / product / technology / system against COVID-19	<p>Telluride, CO (March 19, 2020) –United Biomedical, Inc. (UBI) and its subsidiary c19 are taking on the COVID-19 pandemic by partnering with San Miguel County, Colorado, to be the first in the United States to test an entire county with their COVID-19 antibody test for the SARS-CoV-2 virus. The testing is being offered free of charge by UBI and c19 and will be administered by the Public Health Department of San Miguel County, with the goal of detecting and containing community spread, and providing a more accurate assessment of disease prevalence.</p> <p>UBI is a leading international biopharmaceutical group that has successfully developed diagnostics and vaccines for chronic and infectious diseases for more than 30 years. The company has developed an antibody blood screening test for COVID-19 and, at the same time, is progressing a vaccine for COVID-19, which is currently in animal testing. The company is leveraging its prior work with SARS and its extensive collaborations in China, Taiwan and the world, to validate and commercialize this antibody diagnostic test and vaccine through existing manufacturing infrastructure. Through its c19 subsidiary, the company will be one of the first in the nation to offer these antibody tests.</p>
